

your product *

our technology...

the *fastest* and *least expensive* way

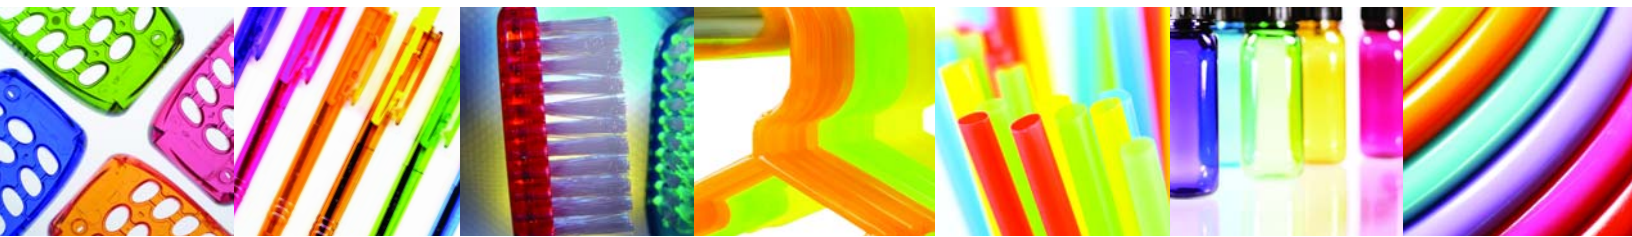

to *get* custom colors,

on demand.

* and we're not just talking about golf balls...

the wave
color
of the
infusion
future

Cost effective **color** on *demand* has arrived. Now you can **colorize** your plastic parts, in as many different **colors** and quantities as you want, and at a fraction of the cost you're used to paying. With **REPLEX PLASTICS**, a licensed Bayer AURA® **Color** Convertor, custom **color** is infused at the molecular level into parts made from clear, translucent or opaque resins. Frequent **color** changes are made easily and quickly meaning more options and lower cost for you. **Color** Infusion technology is ideal for short or long, made-to-order runs, customized products produced by injection molding or extrusion, or for **recoloring** excess inventory. Best of all, it's UV stable and environmentally friendly.

delivers low cost, quick lead times and fast turnarounds, low volume/high volume, and unlimited color choice. Color shifts are available.
